

30. A supported comestible comprising:

- (a) a comestible comprising a body of an edible substance, and
- (b) an edible support suitable for supporting said comestible, said edible support having a first portion extending into said comestible, said first portion having sufficient surface area and means for adherence within said comestible to support said comestible, said edible support having a second portion extending outside said comestible, said second portion having sufficient surface area to provide a utilitarian support for said comestible.

- 31. The supported comestible of claim 30, further including a sufficient surface area on said second portion so that a person can hold said edible support and said comestible with a hand.
- 32. The supported comestible of claim 30 wherein said comestible comprising a body of an edible substance is frozen.
- 33. The supported comestible of claim of 30 wherein said edible support is non-malleable.
- 34. The supported comestible of claim of 30 wherein said edible support is a confection.
- 35. The supported comestible of claim of 30 wherein said edible support is candy.
- 36. The supported comestible of claim 30, further including means for providing a supported comestible with an already familiar taste for a consumer, said supported comestible with an already familiar taste for a consumer comprising a) a first dessert comprising a

body of an edible substance, and b) a long lasting second dessert comprising an edible support, said supported comestible with an already familiar taste for a consumer comprising ingredients of a confection manufacturer, said supported comestible is arranged to provide a familiar taste for said consumer, and is arranged to comprise a plurality of flavors, colors, ingredients, configurations, orientations and designs, said designs includes whimsical designs.

37. The supported comestible of claim 30, further including a lollipop in said supported comestible, said lollipop is arranged to comprise a confection, said confection includes chewing gum, said lollipop is arranged to comprise a cookie.
38. The supported comestible claim 30 wherein said edible support is a composite support having a plurality of ingredients, said plurality of ingredients comprising means for a) making said composite support stronger and less prone to breakage, and b) inhibiting the horizontal breaking of said composite support, said composite support is arranged to comprise a moisture-proof barrier, said composite support is arranged to comprise a plurality of flavors, colors, ingredients, configurations, orientations and designs, said designs includes whimsical designs.
39. The edible support of claim 30 wherein said edible support comprises a homogeneous composition, said homogenous support is arranged to comprise a single homogenous ingredient, said homogenous support is arranged to comprise a plurality of homogenous ingredients, said homogenous support is arranged to

comprise a plurality of colors, flavors, textures, configurations, orientations and designs, wherein said homogenous support has the ingredients comprising dextrose, maltodextrin, citric acid, magnesium stearate, and flavoring, wherein said homogenous support is made in the shape of a whistle capable of making a whistle sound for the combined use as an edible support and a toy.

40. The supported comestible of claim 30, further including a plurality of cookies situated on the front and back surfaces of said supported comestible, for providing a supported sandwiched comestible, said supported sandwiched comestible is arranged to comprise an edible coating.
41. The supported comestible of claim 30, further including a moisture-proof barrier on said comestible and said edible support, said moisture-proof barrier comprising a) means for preventing the transfer of moisture from said comestible to said edible support, b) means for providing a secure hold of said comestible to said edible support for consumption of said supported comestible, c) means for providing a long shelf life for said supported comestible, d) means for separating a plurality of comestibles from each other on said edible support, e) means for providing additional flavor and enjoyment on said edible support, said moisture-proof barrier comprising a) texture on said moisture-proof barrier for providing extra adherence of said comestible to said edible support, and b) additional flavor and a light crunch texture on said comestible and said plurality of comestibles.

42. The supported comestible of claim 30, further including an edible coating on said edible support and said comestible, said edible coating provides additional flavor to said supported comestible, said edible coating separates a plurality of comestibles on said edible support.
43. The supported comestible of claim 30, further including a protective mess guard on said supported comestible, said protective mess guard provides a physical barrier for effectively keeping fingers from melting ingredients on said supported comestible and from getting messy, wherein said protective mess guard comprises texture for a better grip of said supported comestible, wherein said protective mess guard is an edible mess guard.
44. The supported comestible of claim 30, further including a protective drip guard on said supported comestible, said protective drip guard catches melting portions of said comestible for preventing a mess on fingers and clothing, wherein said protective drip guard is an edible drip guard.
45. The supported comestible of claim 30, further including means for administering medicine provided in said supported comestible.
46. The supported comestible of claim 30, further including a plurality of edible supports for supporting said comestible, said plurality of edible supports each having a first portion extending into said comestible, said each first portion having a sufficient surface area and means for adherence within said comestible to

support said comestible, said plurality of edible supports each having a second portion extending outside of said comestible for providing a utilitarian support for said comestible.

47. The supported comestible of claim 30, further including a plurality of comestibles on said edible support, said plurality of comestibles are arranged to comprise a plurality of colors, flavors, and ingredients and differ from each other.

48. The supported comestible of claim 30, further including an additional fun ingredient on said comestible and said edible support, said additional fun ingredient adds flavor and enjoyment, said additional fun ingredient is arranged to provide increased surface area for supporting said comestible on said edible support, said additional fun ingredient comprises a confection, said confection includes chewing gum.

49. The supported comestible of claim 30, further including means for displaying said supported comestible, said means for displaying includes means for enabling said supported comestible to stand upright and on its own on a flat surface.

50. A supported comestible comprising:

- (a) a comestible comprising a body of an edible substance, and
- (b) an edible composite support comprising a plurality of ingredients suitable for supporting said comestible, said edible composite support having a first portion extending into said comestible, said first portion having a sufficient surface area and means for adherence within said comestible to support said comestible, said edible

composite support having a second portion extending outside said comestible, said second portion having a sufficient surface area so that a person can hold said support and said comestible with a hand, said plurality of ingredients comprising a) means for making said composite support stronger and less prone to breakage, and b) means for inhibiting the horizontal breaking of said composite support, said composite support is arranged to comprises a moisture-proof barrier, said composite support is arranged to comprise a plurality of flavors, colors, configurations and orientations, said composite support is arranged to comprise a void.

51. The supported comestible of claim of 50 wherein said comestible comprising a body of an edible substance is frozen.

52. The supported comestible of claim of 50 wherein said edible composite support is non-malleable.

53. The supported comestible of claim of 50 wherein said edible composite support is a confection.

54. The supported comestible of claim of 50 wherein said edible composite support is candy.

55. The supported comestible of claim 50 wherein said edible composite support is a candy bar.

56. A supported comestible comprising:

- (a) a comestible comprising a body of an edible substance, and
- (b) an edible support suitable for supporting said comestible, said edible support comprising a homogeneous composition, said edible homogenous support having a first portion

extending into said comestible, said first portion having sufficient surface area and means for adherence within said comestible, to support said comestible, said edible support having a second portion extending outside said comestible, said second portion having a sufficient size to provide a utilitarian support for said comestible, said edible support is arranged to comprise a plurality of ingredients, colors, flavors, configurations, orientations, and designs.

57. The supported comestible of claim of 56 wherein said comestible comprising a body of an edible substance is frozen.

58. The supported comestible of claim of 56 wherein said edible homogenous support is non-malleable.

59. The supported comestible of claim 56 wherein said edible homogenous support is candy.

60. An edible support for use in supporting a frozen comestible comprising an edible support member, said edible support member comprising a body of a edible substance suitable for supporting a frozen comestible, said edible support member having a first portion for extending into said frozen comestible, said first portion having sufficient surface area and means for adherence within said frozen comestible to dependably support said frozen comestible, said edible support having a second portion for extending outside said frozen comestible, said second portion having a sufficient size for providing a utilitarian support for said frozen comestible, said edible support is arranged to comprise a void, said edible support is arranged to comprise a plurality of ingredients, colors, flavors, configurations,

orientations and designs, said frozen comestible is arranged to provide a first dessert for a consumer, said edible support is arranged to provide a second dessert for said consumer, whereby said edible support provides a long lasting, totally edible support for a frozen comestible.

61. The edible support for use in supporting a frozen comestible of claim 60 wherein said edible support is a non-malleable support.

62. The edible support for use in supporting a frozen comestible of claim 60 wherein said edible support is a confection.

63. The edible support for use in supporting a frozen comestible of claim 60 wherein said edible support is candy.

64. A supported frozen comestible comprising:

- (a) a comestible comprising a body of a frozen edible substance,
- (b) an edible support suitable for providing a utilitarian support for said comestible, and
- (c) means for supporting said comestible, whereby a consumer can enjoy a longer lasting supported frozen confection that can be entirely eaten.

65. The supported frozen comestible of claim 64 wherein said edible support is a non-malleable support.

66. The supported frozen comestible of claim 64 wherein said edible support is a candy support.

67. The supported frozen comestible of claim 64, further including means for providing a safe supported comestible for children.

68. A method of providing a supported frozen comestible comprising:

- (a) providing a comestible comprising a body of an edible substance suitable for freezing,
- (b) providing an edible support, said edible support having first and second portions, for supporting said comestible,
- (c) inserting said first portion of said edible support, into said comestible, said first portion comprising sufficient surface area and means for adherence inside said comestible to support said comestible,
- (d) freezing said comestible and said edible support, and
- (e) leaving said second portion, having sufficient surface area outside of said comestible to provide a utilitarian support for said comestible, whereby a consumer can enjoy a long lasting supported frozen confection, which includes eating the support.

69. The method of providing a supported comestible of claim 68 wherein said edible support is a non-malleable support.

70. The method of providing a supported comestible of claim 68 wherein said edible support is a candy support.

71. The method of providing a supported comestible of claim 68, further including a sufficient size on said second portion so that a person can hold said edible support and said comestible with a hand.
